# Website Technology Stack

**Frontend: React + Tailwind CSS**

React is used for building the interactive user interface, while Tailwind CSS helps in creating a responsive and custom-designed layout with utility-first CSS classes.

**Backend: Sanity CMS + Node.js**

Sanity CMS is used as the headless content management system to manage content, while Node.js powers the backend to handle server-side logic and API interactions.

**Database: Sanity CMS**

Sanity CMS also acts as the database, where content is stored and fetched dynamically.

**Hoisting: Handwritten Code**

Hoisting behavior is manually coded and managed to ensure variables and functions are properly lifted and accessible where needed in the JavaScript environment.
